linkedin.com/in/sanyam-trehan | github.com/sanyamtrehan

Full stack engineer with **5+ years** building multi-portal SaaS products in React, Angular, and NestJS. Cut landing-page load (LCP) from **~30s to under 2s**, shipped an **LLM-powered claim review feature** that cut review time from **~5 minutes to under 30 seconds**, and built shared libraries now used across 3 React portals. Grew from intern to senior engineer on the same products, owning features from Figma to API to production.

Skills

Frontend	React, React Query, NextJs, Angular (SSR, Material, v14→v19 upgrade), TypeScript, Ionic, Tailwind CSS, PWA, ARIA accessibility
Backend	NestJS, Node.js, TypeORM, PostgreSQL, REST APIs
DevOps	Docker, GitHub Actions, CI/CD, Kubernetes, AWS
Testing & quality	Jest, Cypress, ESLint (custom rules), Sentry
Design & Tools	Git, Figma, Webflow, Jira
AI-Assisted	OpenAI API (GPT-4.1 mini), Claude, Codex, Atlassian MCP, workflow automation

Work experience

The Ninja Studio | Senior Software Engineer *Remote | Feb 2025–Present*

Joined with my team when our products moved over from Koverhoop.

KollabHR: HR Management Platform | React, NestJS, React Query, TypeScript

- **3 React portals** standardized on 2 shared libraries I built (UI components and TypeScript models), consolidating forms, validation and app startup with runtime configuration and initialization error handling
- **5 core modules** shipped from day one (employees, departments, designations, assets, AI assistant), with React Query handling API mutations and a Slack integration auth flow on the NestJS side.
- Owned the **leave and holiday module** end to end, including a **full redesign from Figma to code**: leave calendar, leave policy forms, holiday copy with weekend rules, and public-holiday import.
- **5–6 developers** guided on architecture decisions and code review.
- **Intern mentored** from basic components to architecture-level React through a multi-day challenge I designed (widget registry, hook factory, compound components) and a review rubric agreed with senior developers.
- **~90 min → under 10 min** of weekly reporting, after automating Jira tracking, stand-ups and weekly reports with Claude and Atlassian MCP.
- **Patched a ReDoS vulnerability** and moved all workspaces to ESLint 9 flat config with reusable GitHub Actions.

GoKlaim: Employee Benefits Platform | Angular, NestJS, TypeScript

- **~5 min → under 30 sec claim review time with a GPT-4.1 mini review feature built with a backend engine**er: designed the approach and prompts, built the review interface and APIs, and added automatic receipt rotation from model output.
- **5 major versions in one upgrade:** moved 3 Angular portals from v14 to v19 (TypeScript 4.7 → 5.8).
- **Replaced the paid Cypress Dashboard** with in-house HTML failure reports (S3, 7-day expiry, Slack alerts), ending debugging through raw text logs.

TenantPay: Rental Payment Platform | Ionic Angular, TypeScript

- Fixed intermittent permission and sidebar failures by refactoring async loading and navigation, stabilizing flaky Cypress tests.

Koverhoop | Senior Software Engineer *Remote | Jun 2021 – Jan 2025*
Senior Software Engineer (Dec 2023 – Jan 2025) · Full Stack Engineer (Dec 2021 – Dec 2023) · Intern (Jun 2021 – Dec 2021)

GoKlaim — Employee Benefits Platform | Angular, Nest, TypeScript

- **~30s → under 2s** landing-page LCP, by fixing Angular SSR, rendering logic and CSS after users reported slow loads.
- **Sole frontend developer for ~2 years** across 3 portals (company, admin, member); built the member portal from scratch and led its redesign.
- **~1,400 lines removed across 200+ files** by replacing ad-hoc dialogs with one reusable component modelled on Angular Material's MatDialog.
- **Claims review UI reused across 3 portals:** approve/decline, allowance details, similar claims, receipt drag/zoom/rotate.
- **Owned the Cypress E2E suite** and frontend quality tooling, including 2 custom ESLint rules (cognitive complexity, max functions per class).
- **Jest-tested NestJS APIs** for claims, wallets, roles and permissions, and S3 uploads, with migrations and seeders.
- Shipped 2FA (co-designing the flow with the backend team), inactivity logout, Sentry error tracking, and PAD/EFT and invoice payments with the Zumrails SDK.

Freelance & Personal Projects

OpenTune — Web Guitar Tuner | Next.js, React, TypeScript, Web Audio

- **Offline-ready PWA** guitar tuner with preset and custom tunings, reference-tone playback and microphone input.
- Testable TypeScript modules for pitch detection and audio synthesis, with interactive SVG interfaces for notes, chords and scales.

Balance Sheet Data Extraction Tool | Python, Angular, WebSockets

- Co-developed **PDF-to-Excel extraction**, locating balance-sheet content through token matching and exporting requested financial fields.
- Built the **complete Angular frontend** for **batch document processing**, with live progress updates and processing feedback through **WebSockets**.

SVP — Home Media Server | Nest, Angular, RxJs

- **Instant seeking over HTTP range requests** (206 Partial Content) in a LAN media server I use daily to stream from laptop to TV, with a recursive library scan and a custom player (seek bar, playback speed, keyboard shortcuts).

Education

SLIET | Bachelor's degree in CSE (lateral entry) *Longowal, Punjab | June 2017 - June 2020 | CGPA 9.02/10*

Govt Polytechnic | Diploma in CSE *Kangra, Himachal Pradesh | June 2014 - June 2017*
